### **Kodiak's New R11 Cold Chain Shipping Containers are Now in Production**

Houston, TX September 5, 2006 – Kodiak Thermal Technologies, Inc. announced today that the new Kodiak R11 cold chain shipping containers are now in production.

Kodiak's manufacturing facility in Kingsville, Texas has begun ramping up for the new R11 cold chain shipping containers. The R11 is the "little brother" of Kodiak's flagship R36 cold chain shipping container. The R11 unit has the same unique features, qualities and capabilities as the R36 unit. It is designed and manufactured to the exact high standards. The R11 is a smaller, more portable version of Kodiak's R36 container. The R11 has an 11 liter useable payload area which makes it the perfect choice for smaller applications. The R11 is designed and manufactured to the same high standards of the R36. The R11 is the practical cold chain shipping solution for handling vaccines, clinical trials, blood, organs, tissue and even food. The application possibilities are endless. With our 5-day hold time, spoilage is eliminated, and shipping cost are greatly reduced by diminishing the reliance on overnight shipping. Additionally, Kodiak's available on-board data logger monitors both internal and external temperature through the entire shipment.

Kodiak Thermal Technologies, Inc. develops patented reusable cold chain shipping and storage containers for the transportation of temperature-critical products in the medical and industrial chemical industries. For further information, contact Jannie Lewis at 713.686.1553 ext. 10.
